Chapter Awards Conferred

Public Works Project of the Year

The purpose of the Public Works Project of the Year Award shall be to promote excellence in public works projects by recognizing the partnership between the managing agency, the consultant/architect/engineer, and the contractor who, working together, complete public works projects.

Although these rules shall govern the award of the NYMC Public Works Project of the Year Award, these rules use the same criteria for selection of the APWA Public Works Project of the Year Award, and therefore, the Chapter winner can be submitted for consideration by APWA National.

Nominations of projects are to be made by the member public works agencies to the Chapter Awards Committee at the address below. Each agency is limited to one nomination.

The recipient of the NYMC Public Works Project of the Year Award shall be determined by the Chapter Executive Board, upon the recommendation of the Chapter Awards Committee appointed annually by the Chapter President. The Committee shall meet during the third quarter each year to select the proposed award recipient from among the submissions received from the member public works agencies located within the Chapter area.

The project must have been completed during the preceding twelve months and must qualify as a public works project. Public works is defined as the physical structures and facilities that are developed, owned, and maintained by public agencies to house governmental functions and provide water, power, waste disposal, transportation, and similar services in accordance with established public policy.

The criteria to be used in the selection process shall include:

1. Utilization of good construction management techniques and completion of the project on schedule.
2. Safety performance and a demonstrated awareness of the need for a good overall safety program during construction.
3. Community relations as evidenced by efforts to minimize public inconvenience due to construction, safety precautions to protect public lives and property, provision of observation areas, guided tours, or other means of improving relations between the agency and the public.
4. Demonstrated awareness for the need to protect the environment during construction. This includes any special considerations given to particular environmental concerns raised during the course of the project.
5. Unusual accomplishments under adverse conditions including, but not limited to, adverse weather, soil, or other site conditions over which there was no control.

6. Additional considerations deemed of importance to the public works agency; such as exceptional efforts to maintain quality control and, if value engineering is used, construction innovations as evidenced by time and/or money-saving construction techniques developed and/or successfully utilized.

<u>Year</u>	<u>Project</u>	<u>Municipality</u>
1999	Rockland County Composting Facility	Rockland County Solid Waste Management Authority
